## PROFESSIONAL SUMMARY

Java Backend Developer with 3+ years of experience building scalable, workflow-driven enterprise applications using Java, Spring Boot, and Microservices Architecture. Specialized in Camunda BPM process orchestration, RESTful API design, and Spring Security. Proven track record in banking-domain automation, with hands-on exposure to PostgreSQL, Docker, Jenkins CI/CD, OpenShift and AWS ECS. Consistently delivers clean, robust and maintainable code aligned with SOLID principles.

## TECHNICAL SKILLS

**Core:** Java, SQL

**Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, OAuth2 Resource Server, Hibernate, Microservices Architecture, Springdoc/OpenAPI, Netflix Eureka, Spring Cloud Gateway

**Workflow:** Camunda 8 (Zeebe), Camunda BPM, BPMN 2.0, DMN Decision Tables, Zeebe Job Workers, Camunda Tasklist API, Camunda Cockpit, Process Orchestration

**Security:** Keycloak, JWT Authentication, OAuth2, RBAC, Multi-Tenancy

**Database:** PostgreSQL, Flyway Schema Versioning, Multi-Tenant Schema Routing, Query Optimization, Database Design

**Testing:** JUnit, Mockito, Unit Testing, Integration Testing, Testcontainers

**DevOps:** Docker, Jenkins CI/CD, OpenShift, AWS Elastic Container Service, Maven, Kubernetes, Prometheus, Grafana, ELK

**Integrations:** Zeebe Client, Camunda Tasklist REST API, Kafka, Resilience4j, Third-Party API Integration, Async Messaging

**Collaboration:** Git, Bitbucket, Code Reviews, Agile/Scrum

**Domain:** Banking Workflow Automation, Customer Onboarding

## WORK EXPERIENCE

### Reverside Global Solutions

Feb 2023 – Present

*Associate Consultant – Java Backend Developer*

Kolkata, India

- Designed and implemented workflow-driven microservices using Camunda BPM, covering process orchestration, human task management, and production monitoring via Cockpit.
- Built scalable Spring Boot backend services following layered architecture and SOLID principles; developed secure RESTful APIs with Spring Security, JWT authentication, and RBAC.
- Implemented asynchronous inter-service messaging to improve decoupling and reliability; added retry mechanisms, exception handling, and input validation for fault-tolerant services.
- Optimized PostgreSQL performance using Hibernate/JPA with native queries; managed schema evolution via Flyway for consistent deployments across environments.
- Automated CI/CD pipelines using Jenkins; containerized applications deployed to OpenShift with zero-downtime releases; monitored health and logs via OpenShift dashboards.
- Wrote comprehensive JUnit and Mockito test suites ensuring high regression safety and release confidence; developed backend services enabling real-time third-party data exchange.
- Contributed to banking customer support workflow automation, improving process efficiency and service turnaround time; collaborated with QA, DevOps, and business stakeholders in Agile/Scrum teams.
- Orchestrated a multi-phase customer onboarding workflow using Camunda 8 (Zeebe), implementing Zeebe job workers across FICA verification, KYC/CDD/EDD, risk categorization, approval routing, and account activation for a South African banking client.
- Engineered a multi-tenant platform with Keycloak OAuth2 JWT authentication, per-tenant schema routing, and role-based access control — enabling multi-bank deployment from a single codebase.
- Integrated Camunda Tasklist REST API for human task lifecycle management (search, claim, complete), applying SOLID principles across the client, session management, and variable-mapping layers.

- Developed Angular frontend features for the customer onboarding platform, including workflow task management views, dynamic form rendering based on BPMN task context, and integration with backend REST APIs.
- Designed DMN decision tables for automated risk categorization and approval routing, reducing manual decisioning effort across compliance screening, credit scoring, and product-based escalation paths.
- Built a multipart REST endpoint supporting identity document upload at workflow initiation, with file storage and document path propagation to downstream process workers.
- Extended Flyway schema lifecycle to support multi-tenancy, SLA tracking, POPIA consent, and role migration across all deployment environments.

## TECHNICAL PROJECTS

---

### Resilient Event-Driven Microservices Platform (Personal Learning)

- Built a microservices backend using Spring Boot with Netflix Eureka (service discovery) and Spring Cloud Gateway (centralized routing).
- Implemented event-driven communication via Apache Kafka for async processing; added Resilience4j circuit breakers, timeouts, and fallbacks to prevent cascading failures.
- Containerized services with Docker and deployed on Kubernetes; added observability with Prometheus + Grafana + ELK Stack; validated integrations using Testcontainers.

## CERTIFICATIONS

---

Salesforce Certified Administrator | Salesforce Certified Platform Developer I

## EDUCATION

---

### University of Engineering and Management, Kolkata

2019 – 2023

*B.Tech – Computer Science & Engineering*

DGPA: 8.52 / 10.0

### Kendriya Vidyalaya Barrackpore AFS

2018 – 2019

*Higher Secondary Certificate – Computer Science*

83.4%
