PROFESSIONAL SUMMARY

Java Backend Developer with 3+ years of experience building scalable, workflow-driven enterprise applications using Java, Spring Boot, and Microservices. Specialized in Camunda BPM process orchestration, RESTful API design, and Spring Security — with a proven track record in banking-domain automation and hands-on exposure to PostgreSQL, Docker, Jenkins CI/CD, OpenShift, and AWS ECS.

TECHNICAL SKILLS

Core: Java, SQL

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, OAuth2, Hibernate, Microservices, Netflix Eureka, Spring Cloud Gateway

Workflow: Camunda 8 (Zeebe), Camunda 7 BPM, BPMN 2.0, DMN Decision Tables, Zeebe Job Workers, Camunda Tasklist API

Security: Keycloak, JWT Authentication, OAuth2, RBAC, Multi-Tenancy

Database: PostgreSQL, Flyway, Multi-Tenant Schema Routing, Query Optimization

Testing: JUnit, Mockito, Unit Testing, Integration Testing, Testcontainers

DevOps: Docker, Jenkins CI/CD, OpenShift, AWS ECS, Maven, Kubernetes, Prometheus, Grafana, ELK

Integrations: OpenFeign, Kafka, Resilience4j, Zeebe Client, Camunda Tasklist REST API, Async Messaging

Collaboration: Git, Bitbucket, Code Reviews, Agile/Scrum

WORK EXPERIENCE

Reverside Global Solutions

Feb 2023 – Present

Associate Consultant – Java Backend Developer | Kolkata, India

- Designed and shipped **10+ Spring Boot microservices** for enterprise banking clients — owning each service end-to-end from architecture through deployment, with no prior codebase to build on.
- Automated complex banking workflows using **10+ Camunda BPMN processes** — replacing fragmented manual work spread across JIRA, ServiceNow, and internal tools with a single, unified platform that drastically cut resolution time.
- Integrated **6+ enterprise systems** (ServiceNow, JIRA, LDAP, SMTP, Keycloak, Camunda) via secure REST APIs with OAuth2 security, fault-tolerant circuit breakers, and automated database schema versioning throughout.
- Engineered a **multi-tenant platform** for a South African banking client — one codebase serving multiple banks simultaneously, with per-bank data isolation, role-based access control, and AI-assisted fraud detection baked in.
- Delivered projects **from zero to production-ready within months** — leveraging AI-assisted development for architecture design, code review, and testing to maintain high quality standards across service boundaries.

TECHNICAL PROJECTS

Production Support Automation Platform

Enterprise Banking · Backend Engineer

- Built a **centralised data hub** that mirrors live data from multiple enterprise systems into one interface — giving the banking support team a real-time view of all active issues without switching tools.
- Engineered **bidirectional sync** across ServiceNow, Jira, and the in-house portal — any update in one system automatically reflects across all others, eliminating duplicate work and inconsistencies.
- Built the support portal backend from scratch — covering ticket creation, status tracking, document storage, automated email notifications, and a full audit trail of every action taken.
- Implemented the **Orchestration Saga pattern with Camunda 7** as the central coordinator — managing every step across services and ensuring no task is lost or duplicated in the support workflow.

Java 21 · Spring Boot 3.3 · Camunda 7 · OpenFeign · PostgreSQL · OAuth2 · Resilience4j · Docker · OpenShift · Jenkins

Customer Onboarding Platform

Enterprise Fintech · Full-stack Contributor

- Built a **full-stack platform automating the entire customer onboarding lifecycle** across 7 sequential phases — from initial application intake through identity checks, risk assessment, approvals, and final account activation.
- Automated **compliance and risk decisions** using DMN decision tables and AI-integrated checks — covering fraud detection, credit scoring, and document classification without manual intervention at each stage.
- Designed a **multi-tenant, multi-bank architecture** with Keycloak JWT security and role-based access control, enabling the platform to serve multiple banking clients simultaneously from a single codebase.
- Built an **Angular frontend** with real-time SLA dashboards, compliance audit trails, and KPI visualisations — giving compliance officers and bank staff a clear, live picture of every onboarding in progress.

Java 21 · Spring Boot 3.3 · Camunda 8 · Angular 21 · PostgreSQL · Keycloak · Amazon ECS · DMN · Flyway

Event-Driven E-Commerce Platform

E-Commerce · Solo Project

- Built a **production-grade microservices platform** solo — 7 purpose-built services (API Gateway, Discovery, Config, Product, Order, Inventory, Notification) communicating via Eureka-based service discovery.
- Implemented **event-driven order processing via Apache Kafka** — placing an order asynchronously triggers inventory checks and notification dispatch across services without tight coupling.
- Added **full observability**: centralised logging with ELK, metrics with Prometheus + Grafana, and distributed tracing — plus Resilience4j circuit breakers to prevent one service failure from cascading to others.

Java 21 · Spring Boot · Spring Cloud · Kafka · PostgreSQL · MongoDB · Kubernetes · Docker · ELK · Prometheus · Grafana · Testcontainers

CERTIFICATIONS

Salesforce Certified Administrator | Salesforce Certified Platform Developer I

EDUCATION

University of Engineering and Management, Kolkata

2019 – 2023

B.Tech – Computer Science & Engineering | DGPA: 8.52 / 10.0

Kendriya Vidyalaya Barrackpore AFS

2018 – 2019

Higher Secondary Certificate – Computer Science | 83.4%
